

Search and Explore

Your gateway to a world of actionable data

Search and Explore brings together all your data, both historic and live, using a common data ontology and within a single data platform.

Make robust and data-led management and operational decisions and drastically reduce the time required to

gather and assess twins. From individual pieces of equipment to systems and zones, your portfolio digital twin is made up of thousands of different components known as 'twins'.

Search far and wide

Search and explore any twin and all related information at either a portfolio or building level.

Find, view and update information, files and operational live data whilst also exploring the relationship and interactions between different twins.

Access comprehensive data for improved decision making

Centralise all equipment data and files for quick access

Easily export data for further analysis

Analyse data trends over time for operational analysis

Explore relationships between equipment and systems for full context

Easily update twin information as required

Access all warranty information to inform maintenance actions

View operational live data for monitoring equipment performance
